

Collaborative Practice Assessment Tool

Introduction:

Collaboration is a key factor in better patient and provider outcomes. Collaborative practice has been described as a: “process for communication and decision making that enables the separate and shared knowledge and skills of care providers to synergistically influence the client/patient care provided.” (Way, Jones & Busing, 2000)

Instructions:

Please respond to the following statements *from the perspective of being a member of a specific patient care team*. If you work on more than one team, provide answers based on the team you work with most often and/or hope to develop into a more collaborative team. Those practitioners who are considered to be members of the team will vary depending on the service provided, but any person involved in the day-to-day care of patients should be considered a member of the team for the purpose of answering the survey. For example, this may also include clerks, volunteers, consultants, etc.

There are no right or wrong responses. Honest responses are the most helpful. If there are any questions that you feel are not applicable to your team you may skip them, but please try to answer each question to the best of your ability. Your responses are confidential and the results will be aggregated and used to understand your team functioning.

Thank you for your time and thoughtful consideration.
